Profile

Through projects, hackathons, and collaborative team experiences, I have gained hands-on exposure to solving real-world problems using modern technologies. I bring a proactive learning mindset, adaptability, and strong analytical thinking to every task I undertake. I am seeking internship opportunities where I can apply my technical knowledge, contribute effectively in a collaborative environment, and gain practical, hands-on experience in software development. *I am a third-year B.Tech student in Computer Science and Engineering at Kalinga Institute of Industrial Technology (KIIT), with a strong interest in developing scalable and user-centric software solutions. My current focus includes strengthening core problem-solving skills through Data Structures and Algorithms, while actively exploring Web Development alongside Cloud Computing and Data Analytics.*

Through projects, hackathons, and collaborative team experiences, I have gained hands-on exposure to solving real-world problems using modern technologies. I bring a proactive learning mindset, adaptability, and strong analytical thinking to every task I undertake.

I am seeking internship opportunities where I can apply my technical knowledge, contribute effectively in a collaborative environment, and gain practical, hands-on experience in software development.

Education

Kalinga Institute of Industrial Technology	2023 – 2027
B.Tech in Computer Science and Engineering	
Maharishi Vidya Mandir	2020 – 2022
Higher Secondary Education (83.4%)	
Holy Cross H.S School	2020
Secondary Education (90.5%)	

Projects

- **NagarMitra – Civic Issue Tracker** (React Native, Node.js, MongoDB, AWS) GitHub
 - **NagarMitra — Civic Issue Management Staff Portal**
 - **Project Summary:** A secure, staff-only civic issue management platform designed to help municipal employees efficiently track, manage, and resolve citizen-reported urban issues. Authenticated staff members can view **only their assigned cases**, update issue statuses in real time, and coordinate resolution workflows across departments such as roads, sanitation, water supply, lighting, and public health.
 - **Key Capabilities:**
 - * Implemented an **automated domain-aware routing engine** that assigns issues to the correct department and balances workloads among employees.
 - * Built a **geospatial heatmap-based dashboard** providing real-time visibility into issue density, city-wide hotspots, and resolution trends for data-driven prioritization.
 - * Enabled **end-to-end issue lifecycle management** (Accept → In Progress → Photo Upload → Resolved) with automated citizen notifications.
 - * Integrated **staff performance analytics** including resolution time, completion rate, and SLA tracking with PDF/CSV export.
 - * Designed a **mobile-responsive, lightweight UI** optimized for on-field municipal staff.
 - * Added **multilingual interface support (10+ Indian languages)** for accessibility and inclusivity.
 - * Enforced **secure role-based access control** ensuring staff can view only assigned cases.
 - **Tech Stack:**
 - * **Frontend:** React.js, React Router, HTML5, CSS3, Responsive Web Design, Multilingual UI (UTF-8), Chart.js / Recharts
 - * **Backend:** Node.js, Express.js, RESTful API architecture
 - * **Database:** MongoDB
 - * **Authentication & Security:** JWT-based authentication, RBAC, HTTPS enforcement, input sanitization and validation
 - * **Maps & Geospatial:** Google Maps API / Leaflet, heatmap and marker-based visualization
 - * **Notifications & Media:** Real-time task notifications, secure image and voice uploads, pre-signed URLs

- * **Reporting & Analytics:** Resolution metrics, SLA monitoring, PDF/CSV export
- * **Scalability & Performance:** Concurrent user handling, optimized map rendering, scalable Node.js backend
- **PashuMitra – AI Farm Management** (*React, Node.js, Python, AWS*) GitHub Live
 - **AI-Powered Livestock Health & Farm Management Platform**
 - **Problem Statement:** Addresses delayed disease detection, limited veterinary access, language barriers, and poor health record management that lead to economic losses and outbreaks.
 - **Key Features:**
 - * **AI-based disease detection** using image and symptom analysis with severity classification and geospatial alerts.
 - * **Multilingual platform (26+ Indian languages)** using IndicTrans2 with agricultural domain adaptation.
 - * **Veterinary network & telemedicine** including location-based vet discovery, emergency alerts, scheduling, and video consultations.
 - * **Real-time outbreak alerts and mapping** with regional risk visualization.
 - * **Comprehensive digital health records** covering vaccination tracking, prescriptions, and secure document storage.
 - * **Government and compliance tools** for automated disease reporting, compliance tracking, and policy notifications.
 - * **IoT-ready architecture** for smart sensor integration and predictive health monitoring.
 - **Architecture & Technology:**
 - * **Frontend:** React.js, TypeScript, Framer Motion, Styled Components, Recharts, Leaflet (GIS)
 - * **Backend:** Node.js, Express.js, MongoDB Atlas, REST APIs, JWT authentication
 - * **AI & ML:** IndicTrans2, Computer Vision, NLP-based alerts
 - * **Real-Time Systems:** Socket.io, WebRTC
 - * **Cloud & DevOps:** AWS (S3, SES, SNS, CloudWatch), Docker, CI/CD
 - * **Security:** RBAC, encryption, rate limiting, audit logs
 - **Impact & Outcomes:**
 - * Reduced average disease response time to **under 15 minutes**.
 - * Enabled veterinary access in low-connectivity regions.
 - * Improved data-driven decision-making for farmers and authorities.
 - * Increased transparency through multilingual, AI-grounded insights.
 - **Key Learnings:** Designing large-scale AI healthcare systems, multilingual AI for rural contexts, cloud-native real-time platforms, and AI-IoT-GIS integration.
 - **Future Enhancements:** Native mobile apps, predictive outbreak forecasting, insurance automation, international expansion.
- **Spendora – Finance Tracker** (*Python, Web App*) GitHub Live
 - **SPENDORA — Intelligent Personal Finance Platform**
 - Built a modern personal finance application transforming raw expense data into **actionable insights** using interactive dashboards, AI-driven guidance, and a gamified emerald-based experience.
 - **Key Features:**
 - * Animated emerald-themed landing experience with hero branding.
 - * Secure authentication and reusable UI components.
 - * Real-time financial dashboards with charts, budget tracking, and transaction insights.
 - * Secure CSV, Excel, and PDF uploads with validation and error handling.
 - * AI-powered finance coach providing contextual advice and budget nudges.
 - * Overspending alerts, reward feedback, and gamification system.
 - **Architecture & Technology:**
 - * React 18, React Router DOM, Context API
 - * Recharts, PapaParse
 - * Custom CSS, glassmorphism components, emerald glow effects
 - * Docker-based deployment with secure environment configuration
 - **Key Learnings:** Designing intuitive finance dashboards, secure client-side validation, AI-guided workflows, scalable React state management.
 - **Future Scope:** Advanced analytics, OpenAI-powered insights, bank integrations, crypto and multi-currency

support.

- **Studifyy – Multi-Agent AI Learning Platform** (*GenAI, RAG*) Studifyy
 - **Capstone Project | Google × Kaggle GenAI Agents Intensive**
 - Built an **agentic AI-powered learning companion** supporting content understanding, doubt resolution, revision, assessment, and planning using a coordinated multi-agent architecture.
 - **Key Features:**
 - * Document intelligence with RAG (PDF/image upload, OCR, chunking, embeddings, context-aware Q&A).
 - * Level-adaptive explanations (Class 10, Class 12, University).
 - * Citation-grounded doubt resolution with Gemini fallback.
 - * Adaptive quizzes, flashcards with spaced repetition, and personalized weekly study plans.
 - * Persistent AI chatbot with session and long-term memory.
 - * Text-to-speech with caching for accessibility.
 - * Optimized retrieval and prompt compaction to reduce latency and token usage.
 - **Architecture & Technology:**
 - * Multi-agent orchestration (document, explanation, quiz, flashcards, planning)
 - * Vector search with relevance filtering
 - * React, TypeScript frontend
 - * Supabase, PostgreSQL (RLS-enabled), Google OAuth
 - * Google Gemini API, RAG pipelines
 - **Key Learnings:** Designing scalable agentic systems, efficient memory orchestration, production-grade GenAI deployment.

Experience

- **AICTE Virtual Internship – Data Engineering with AWS (2025)**
 - Completed hands-on training with AWS data engineering tools.
 - Built scalable workflows for real-world data pipelines using AWS services such as S3, Lambda, and Glue.
- **USC.KIIT – UiPath Student Community (Data Analytics, 2025)**
 - Member of UiPath-powered student community endorsed by KIIT T&P Cell.
 - Contributed to real-world data analytics projects using UiPath and Python, enhancing automation and insights.

Achievements

- **Smart India Hackathon (SIH) – PashuMitra (2025)** Pashumitra
 - Secured **2nd position** out of 550+ teams in the internal round with a team of 6 members.
 - Reached the semi-finals and was waitlisted for Problem Statement SIH25006, showcasing excellence in problem analysis, scalable solution design, and cross-functional teamwork.
- **Pandora's Paradox Hackathon – KIIT E-Summit (2025)** Spendora
 - Designed and presented a project praised by mentors and judges for innovation.
 - Earned recognition as a **Special Team** under industry mentorship.
- **Tech Fest – IIT Patna (2024)**
 - Collaborated on designing and building robots for competitive challenges.
 - Enhanced skills in robotics, teamwork, and creative problem-solving.
- **45 Days CodeSprint – USC.KIIT & UiPath (2025)**
 - Ranked among the **Top 30** out of nearly 1,000 participants.
- **GoogleXKaggle (2025): Studifyy** Studifyy
 - Completed Google × Kaggle 5-Day AI Agents Intensive Workshop, earned Google badge, and successfully built & submitted a project.

Certifications

- **Google Cloud:** Generative AI Learning Path [Verify], Intro to Generative AI [Verify], Intro to Large Language Models [Verify], Responsible AI [Verify], Applying AI Principles [Verify]
- **GoogleXKaggle** [Verify]
- **AWS:** Data Engineering [View], Cloud Foundations [View], Forage Solution Architecture [View]
- **UiPath:** Intro to Agentic Automation [View] 45 Days CodeSprint [View], Top 30 Sprinter Recognition [View]
- **Infosys Springboard:** Python Foundation [View], Soft Skills [View]
