## Education

**Kalinga Institute of Industrial Technology**

2023 – 2027

B.Tech in Computer Science and Engineering

**Maharishi Vidya Mandir**

2020 – 2022

Higher Secondary Education (83.4%)

**Holy Cross H.S School**

2020

Secondary Education (90.5%)

## Experience

### • SDE Intern — Soshals

2026

Engineering scalable automation infrastructure using LLM APIs, n8n, and Google Apps Script; shipped 3+ production systems reducing manual operational effort by 80%.

### • USC.KIIT – UiPath Student Community

2025 – Present

Member of UiPath-powered student community endorsed by KIIT T&P Cell; contributed to real-world data analytics projects using UiPath and Python to build automation workflows and generate actionable insights.

## Projects

### • Reddit Scraper → AI Video Generator (Python, Reddit API, LLM APIs, Arcads)

GitHub

- Engineered a 4-stage ETL pipeline — data ingestion → NLP filtering → LLM prompt chaining → AI video synthesis — processing 500+ posts/day and reducing content turnaround from 3 hours to 8 minutes (94% reduction)
- Orchestrated dynamic LLM scriptwriting module generating platform-optimized content across 3 formats (Reels, Shorts, TikTok) with zero human intervention, eliminating 100% manual content sourcing

### • Creator Outreach Automation System (JavaScript, Google Apps Script, Google Sheets)

GitHub

- Architected a 3-tier system — Chrome Extension (Manifest V3) → Apps Script REST backend → Sheets DB — enabling one-click creator capture in under 2 seconds with Scout ID-based deduplication across 200+ creators
- Automated end-to-end CRM workflow — capture → dedup → status tagging → follow-up trigger — cutting per-creator processing time from 4 minutes to 18 seconds (85% reduction)

### • AI UGC Content Engine (LLM APIs, n8n, Google Sheets)

GitHub

- Developed a scalable LLM orchestration system with a 4-layer prompt architecture generating 150+ structured content briefs/session across 5+ brand verticals — 3x more specific than baseline zero-shot prompting
- Delivered JSON-structured output pipelines directly ingestible by downstream tools, compressing ideation-to-execution latency from 48 hours to 15 minutes (95% reduction)

### • NagarMitra – Civic Issue Tracker (React Native, Node.js, AWS)

GitHub

- Built a full-stack geospatial civic platform with GPS-based reporting, heatmap analytics, and LLM-powered classification (88% accuracy); deployed on AWS and awarded **3rd Place — Hack4Impact, SDIS 2026**

## Achievements

### – Smart India Hackathon 2025 – PashuMitra

Link

Secured **2nd Place** out of 550+ teams in internal round; advanced to national semi-finals for Problem Statement SIH25006 with a team of 6.

### – Pandora's Paradox Hackathon – KIIT E-Summit 2025

Link

Received **Special Team Recognition** under industry mentorship for Spendor, a full-stack personal finance tracker.

### – Google × Kaggle – 5-Day GenAI Agents Intensive (2025)

Link

Earned Google badge; built and submitted Studifyy — an AI agent-powered student productivity platform.

## Certifications

– **Google Cloud:** Generative AI Learning Path, LLMs, Responsible AI [Verify]

– **AWS:** Data Engineering, Cloud Foundations [Verify]

– **UiPath:** Agentic Automation, CodeSprint Top 30 [Verify]

– **Google × Kaggle:** GenAI Agents Program [Verify]

## Skills

– **Languages & Frameworks:** Python, JavaScript, C++, SQL, Node.js, React

– **Automation & AI:** LLM APIs, n8n, AI Pipelines, Agentic Workflows, ETL, Web Scraping

– **Cloud & Tools:** AWS (S3, Lambda, Glue), GCP, REST APIs, MySQL, Git

– **Core CS:** DSA, OOP, DBMS, Operating Systems
